This is my interpretation of what 9-ball had to say and has made to much of an impression on me. That he feels modding should never be taken seriously and it should be looked at the way the IKEA furniture company looks at furniture design. tl;dr: TL;DR: Modding is a cheap way to look at your design ideas. The quality of your modding is low and if you are a modder and feel like your modding is good or worth anything it doesn't. The pace of growth in GVA and net exports slowed last month to its weakest since September 2008, as the Italian budget and borrowing costs take their toll. Growth in GVA was 0.8% in July, down from 2.4% in June and only slightly below forecasts in a Reuters poll of economists. Net exports fell by 2.7%, mainly as Italian oil output, which is a quarter of Italy's total output, plunged by half, after a top diplomat said the government may cut the output cap from around 1.6m barrels per day to 1.3m. The Bank of Italy has said it will buy up to €15bn in Italian debt in a sale that will further weigh on market interest rates.[The relationship between social economic status and arterial hypertension in rural population]. Arterial hypertension, as a leading cardiovascular and cerebrovascular disease, has serious social and medical significance. The relationship between arterial hypertension and social economic status has always been concerned in our society. To study the effect of social economic status on the prevalence of arterial hypertension in rural population. A cross-sectional survey was carried out by stratified cluster sampling method in Rangcha Town, Rangcha County, Yunnan Province from August to October in 2007. A total of 5365 residents aged over 40 were selected and 2261 were interviewed (response rate: 44.4%). Information on social economic status including social economic level, family income, education level and asset status was collected by means of questionnaire. The participants were evaluated to have hypertension if they had been confirmed to have elevated blood pressure. The prevalence of arterial hypertension was higher in females and the participants with age over 60 years old. Moreover, the prevalence of arterial hypertension was higher in those from higher social economic level, with higher education level and higher asset status. The correlation between social economic status and arterial hypertension was statistically significant ( $\chi^2(2) = 14.71, 82157476af$
